

BC Service Public Net

Calling the British Columbia Public Service Net. Good evening-net control tonight is _____. My name is _____ and I am located in _____. This is a directed net which meets daily at 18:30 Pacific Time on 3729 kHz as a public service. All stations are welcome and should zero beat with this station. CW stations are asked to offset to give us a clear tone. Please do not interrupt the net except for an emergency, to contact a recent check-in, to correct an error, or to provide a relay.

Please give your station call to get my attention and if you list traffic please advise me before leaving the frequency. The use of standard phonetics saves time and is strongly encouraged.

In the event of an emergency and 80m is not available, please tune to 7075 kHz where the BC Public Service Net would be called under such conditions.

Before beginning regular net activities are there...

1. any net liaison stations from the Northern Net or EMBC?
2. any official relay stations on frequency?
3. any check-ins from mobile or portable stations only?
4. any stations holding net bulletins?
5. any stations with information on sick or injured Amateurs?

Traffic and roll call this evening will begin with the _____.

First I will take check-ins from those listing traffic or wishing to make a station-to-station call.

Begin the net

This concludes the BC Public Service Net for this evening. My thanks to the stations that handled the traffic, supplied relays and those giving us a clear operating frequency. Please tune in tomorrow evening at 18:30 Pacific Time when _____ will be your net control station. The net has now closed at _____ hours. Thank you and 73. This is _____ out.
